 The purpose of this book is to assist fishermen in their choice of the most suitable design, construction (or adaptation) and equipment for a fishing boat not exceeding 70 feet (21 m) in length.

Traditional Fishing Boats of Britain & Ireland Sheridan House, Inc.
 Maritime archaeology, the study of man's early encounter with the rivers and seas of the world, only came to the fore in the last decades of the twentieth century, long after its parent discipline, terrestrial archaeology, had been established. Yet there were seamen long before there were farmers, navigators before there were potters, and boatbuilders before there were wainwrights. In this book Professor McGrail attempts to correct some of the imbalance in our knowledge of the past by presenting the evidence for the building and use of early water transport: rafts, boats, and ships.

Larry Pardey is accepted as one of the master craftsman of the wooden-boat building world. He and his wife, Lin, have built and repaired many boats including two strong, handsome cruising cutters and sailed twice around the world in them. This impressive book shows the process of constructing a boat hull with extensive photographs and drawings and includes ample time-saving procedures. From financial and time planning, lofting, floors and

framing, selection of materials, planking and spiling, design considerations, to deck beams, man-hour norms and details critical to wooden boat construction, this volume serves as the most comprehensive guide a potential builder could ever use. Readers will also appreciate the discussions of how to select from numerous construction methods and materials, how to set up the shop and tips for sharpening and making your own tools. The new appendix on proper adhesive selection is "must" reading.

Drawing on archaeological and literary evidence, Dilwyn Jones examines the importance of the boat in Egyptian ritual and belief, as well as in everyday life. The sun god was thought to travel across the sky in a solar boat, and Egyptians believed that the deserving might join the god Osiris in his divine bark after death. Boats played an important part in funerary ritual; models were often placed in tombs to provide the deceased with safe passage through the Winding Waterway in the underworld. Also, boats are frequently depicted in tomb paintings. The Nile has always been a vital transport artery for Egypt and boats the principal means of travel. Early papyrus skiffs gradually gave way to wooden craft of increasing size and sophistication, ranging from fishing boats and barges to seagoing warships, splendid ships of state and enormous obelisk barges used to transport stone to temples and monuments. Dilwyn Jones traces the development of the different types of boats and the techniques of their construction through the Old, Middle, and New Kingdom periods. The book is illustrated with photographs of boat models and paintings and with line drawings.

The skill necessary to build a boat of some form which will be serviceable and pleasurable is possessed by few amateurs, and as boats and canoes are now so extensively used in athletic and other amusements, and the followers of the rod and gun find them almost indispensable in certain varieties of these pursuits, no doubt very many amateurs would like a little information which would assist them to construct such things. The reason, perhaps, why amateurs do not more often try their skill on boat-building is because there are technical difficulties which seem to throw a barrier in the way of all who do not care, or have not the time, to spend on a thorough study of the subject. Such an idea is a mistake, for boat-building is well worth the amateur's attention; for it is really a simple craft, not requiring nearly so much skill and technical knowledge as good joiner's work. For instance, anyone who can make a box or a table would be able to make an ordinary punt. This book explains and shows how to build smaller wooden boats.

With the gradual phasing out of wooden fishing boats of Scotland it is timely to record some of these handsome vessels. In the years from 1960-80 boat builders produced some of their most shapely and graceful craft, a testament to the skill of both the builders and designers. Initially the designs were a collaboration of builders and skippers, but later the implementation of statutory rules demanded a more structured approach by qualified naval architects, which inevitably resulted in a certain degree of standardisation. James A. Pottinger's new illustrated volume concentrates solely on the graceful wooden boats, large and small, regarded by many to be the best looking boats of all. Many boats are photographed at sea, while other views range from repairs being carried out to the more melancholy sight of beautiful craft being cut up. Boats were once scrapped only due to old age, but sadly political factors now often dictate the destruction of the classic wooden craft included here.
