Practical Manual of the Fascial Distortion Model in the paediatrics Elsevier Health Sciences

In an organized, comprehensive, user-friendly style, this text presents state-of-the-art advances in orthodontics and surgical instrumentation, techniques, and adjunctive cosmetic procedures. It features coverage of conditions common to Class I, II, and III deformities, secondary cleft lip and palate dentofacial deformities, and nasal deformities associated with dentofacial deformities. Most of the chapters cover three major areas: most common orthodontic and surgical treatment of the deformity, adjunctive surgical techniques frequently helpful when added to the common techniques, and alternate treatment approaches describing treatment of less common variations of the deformity. * Unique step-by-step approach to presurgical orthodontic treatment, immediate presurgical planning, surgical techniques, and postsurgical orthodontic treatment. * Takes the reader through the entire process from diagnosis of the deformity to postsurgical assessment of the correction. * Provides a detailed discussion of diagnosis and treatment planning of transverse discrepancies in the maxilla and mandible. * User-friendly

appendix on facial skeleton growth includes methods of applying growth prediction and treatment planning to patient care. * Organized for quick and easy referral to practical information useful in clinical practice. * Focuses on patient assessment and awareness of psychological needs to encourage consideration of whole patient in treatment of deformities. * Depicts cosmetic procedures used to refine the esthetic results following orthognathic surgery, showing how to achieve overall improved patient results and satisfaction.

Körperspuren Springer-Verlag

Fears, anxieties, traumas, and physical and emotional shocks imprint on the body and remain dormant in its vast memory store until they are roused by an event or encounter. They may manifest in a different form or place—a fearful incident may transform itself into a stomachache or a headache, or even a chronic disease. Pain creates its own path. In particular, psychological and emotional stresses affect the functioning of the internal organs. In *Understanding the Messages of Your Body*, Dr. Jean-Pierre Barral explains the relationships that exist between internal organs and emotions, to allow us to free ourselves from the effects of present and past tensions and traumas. The book opens with an explanation of the body-mind relationship and goes on to show how physical-emotional therapy works based on examples from Dr. Barral's clinical practice. The second part of the book offers detailed analyses of various "types" of human personality and the physical-emotional complexes and related organ dysfunctions that accompany them. The author offers advice and encouragement to improve physical, psychological, and emotional health, and recommends physical exercises, psychotherapeutic approaches, and dietary plans that can be used by both professional therapists and the average reader.

Dieses Buch beschreibt ausführlich die Techniken der manualmedizinisch-osteopathischen Untersuchung und Behandlung bei Säuglingen und Kindern im Kleinkind- und Schulalter. Der Schwerpunkt liegt dabei auf der Berücksichtigung der kindlichen Besonderheiten, abweichend von den Techniken beim Erwachsenen. Alle Techniken werden mit brillanten Fotos visualisiert. Präzise und didaktisch klar strukturierte Texte beschreiben für jede Technik das „How-to-do“ und bieten Vorschläge zu deren rationellem Einsatz. Damit ist das Buch ideal für die systematische Einführung in die Praxis und als Nachschlagewerk im klinischen Alltag von bei Kindern manualmedizinisch tätigen Ärzten und Physiotherapeuten geeignet.

Until now the Fascia Distortion Model (in short FDM) has so far played no significant role in the treatment of infants. As our smallest patients haven't any previously learned body language, a classical treatment according to FDM is virtually impossible. With adults it is possible to discuss their symptoms and indicate where the problem lies, this is more or less ruled out with infants. Here we have to rely rather on the results from the clinic and palpation as well as our experience with FDM. As we know as FDM therapists, FDM treatment is often accompanied by pain, but is also very successful. If our little patients have painful distortions then it is the least we can do but to try and relieve that pain. Unfortunately, this process is as painful for younger patients as for adults. Here, the question for therapists is whether such treatment is possibly incompatible with their consciences. In my view, it is almost a duty of the therapist, to relieve the infant from his suffering! Let's administer brief pain during treatment, knowing that in the end it is for the good of the child. Due to the great suppleness of the tissue in younger years, we can achieve a great deal of success within the first one or two treatments. This makes using FDM with infants so interesting. As with my first book, as also here, I will adorn myself mainly with false laurels. This work could only arise due to the help of some ingenious minds that have already set milestones before me in FDM therapy. My intention now is to filter the developments made by some renowned therapists and, together with my experience, implement this for the treatment of infants. Among the great therapists who have inspired me are Andrew Taylor Still, William Sutherland, Stephen Typaldos and Tom Esser. Especially through the latter did I discover my love of treating infants and children.

For this, dear Tom, I retrospectively send you my sincerest thanks. I want to also thank my family who have not only seen little of me due to my practice and seminar activities but also due to my writing this book. I always had you in my thoughts! I hope all readers take pleasure in this book and also hope that I can remove the insecurities and fears about the treatment of infants and also present some worthwhile ideas. If we therapists don't help children, then who will?

Whether mere bumps in the road or genuine crises, we live in a world of unwanted events that no willpower can prevent. In *The Art of Disappearing*, Ajahn Brahm helps us learn to abandon the headwind of false expectations and follow instead the Buddha's path of understanding. Releasing our attachment to past and future, to self and other, we can directly experience the natural state of serenity underlying all our thoughts and discover the bliss of the present moment. In that space, we learn what it is to disappear. Ajahn Brahm, an unparalleled guide to the bliss of

meditation, makes the journey as fun as it is rewarding. *The Art of Disappearing*, comprised of a series of teachings Ajahn Brahm gave to the monks of Bodhinyana Monastery, where he serves as abbot, offers a unique glimpse into the mind of one of contemporary Buddhism's most engaging figures.

Manual Therapy in Children presents a comprehensive conceptual approach to the subject of manual therapy for children of different ages. This approach considers the relationship between the neuromusculoskeletal structure and function at different stages of development and places strong emphasis on the prevention of problems as the child develops as well as on their safe and effective treatment and management. Edited and largely written by a leading European orthopedic physician, the book also includes contributions from over 20 leading practitioners in the field. *Manual Therapy in Children* is soundly based on the latest evidence. Written by an established author with contributions from a large team of clinical experts, the text is supplemented with almost 250 high quality illustrations. It presents a fresh and well-considered approach to the management of a wide range of paediatric problems. All practitioners working with children with neuromusculoskeletal conditions will find this a clinically relevant and practical

resource. Book jacket.
