This first volume of the Dictionary of Pharmaceutical Science and Techniques covers terms used in pharmaceutical technology both in its applications in pharmacy proper and in the pharmaceutical industry. In view of the diversity of methods used in the manufacture and testing of drugs and the great variety of fields from which these methods originate also some general terms relating to physics, engineering and technology are included. Commercial terminology has also been added where it has direct bearing on the subject.

Please note: this is volume 2 in a 2 volume set. You must purchase both volumes to have a complete copy of this book. In 1905, the American Railway Master mechanics Association adopted a resolution, authorizing the creation of an illustrated dictionary of each and every part used in the building of locomotives. The result, edited by famed technical writer George Fowler and published by the railroad gazette, was nearly 700 pages long, and richly illustrated with photographs, etchings, and blueprints. The Locomotive Dictionary was a triumph, and became one of the definitive engineering references for the railroad industry during the steam age. This high-quality reprint of a first edition of this wonderful book, represents the first time in decades that it has been available to the public. Softbound in two volumes, it is a wonderful reference that no steam fan or model railroader should be without.

Accident analysis is not like a classroom problem where the equations are selected and solved, and the matter is considered closed. In this line of forensics, engineering skill must be combined with

skillful practice for the successful presentation of evidence to a jury. In this book, the author demonstrates the application of engineering skills, methods, and judgment for analyzing vehicular accidents. A definition of vehicular accident reconstruction and its role in the legal system is provided. General accident statistics are cited, and some general strategies for accident reconstruction are given, along with many examples and case studies. The author includes novel and unusual treatment of the momentum method and coefficient of restitution (which is not yet widespread in accident analysis) and shows how to select the best methods of analysis in a given accident reconstruction.
