Les substances
lipidiques ont
longtemps été
négligées par les
physiologistes, mais
des recherches
épidémiologiques les
ont récemment portées
sur le devant de la
scène, notamment au
travers de leur intérêt
dans les domaines de
la nutrition et surtout
de la santé chez
l'Homme. Outre leur
importance
énergétique, les lipides
interviennent dans de
nombreux mécanismes
cellulaires dont les
dérèglements peuvent
conduire à des

pathologies parfois
graves. En effet, en
plus de leur impact sur
les maladies
métaboliques, les
systèmes
cardiovasculaire et
immunitaire et les
processus de
cancérisation, le
système nerveux
central peut lui aussi
être altéré à des
degrés divers par une
carence ou un
déséquilibre entre les
constituants lipidiques
ingérés. Après
quelques rappels
historiques sur la
découverte des lipides
et leur utilisation, une
première partie décrit
les principaux lipides
présents dans notre
ration alimentaire.
Puis, les besoins
avérés ou éventuels de
l'Homme en divers

acides gras, stérols et vitamines appartenant au groupe des lipides, sont passés en revue. Enfin, l'impact des principaux lipides sur des pathologies naguère encore peu explorées sous cet aspect est exposé en détail. Les lipides – Nutrition et santé présente, de façon synthétique, un très large panorama de toutes les facettes des lipides, des acides gras aux corps gras les moins abondants, mais tout aussi importants pour l'équilibre de notre organisme. Il permet aux spécialistes de revisiter les principales sources de lipides présentes dans notre alimentation en insistant sur leur production et leur composition. Cet ouvrage s'adresse aux

chercheurs, médecins généralistes et spécialistes, diététiciens et étudiants évoluant dans de nombreux domaines tels que la biologie cellulaire, la nutrition ou encore la pharmacologie.

 Advances in Molecular Spectroscopy, Volume 1 covers the proceedings of the Fourth Meeting of Molecular Spectroscopy, held in Bologna, Italy on September 7-12, 1959. This book is organized into three parts encompassing 69 chapters. The first part presents first some experimental and correlations studies on

molecular structure, followed by discussions on the application of molecular spectroscopic techniques for molecular structure determination. Part II reviews experimental determination of Raman intensities, vibrations of aromatic rings, and IR spectra and electronic structure of various organic compounds. Part III considers the general theories on molecular spectroscopy. This topic is followed by surveys on electron energy, orbital valency, relations among potential energy of diatomic molecules, and determination of rotation structure. This book will be of value to molecular spectroscopists and analytical and organic

chemists.

This Volume 4, subtitled Nut and Beverage Crops, focuses on advances in

breeding strategies using both traditional and modern approaches for the improvement of individual plantation crops. Included in Part I, eleven important nut species recognized for their economical and nutritional importance including Almond, Argan, Brazil nut, Cashew nut, Chestnut, Hazelnut, Macadamia, Peanut, Pine nut, Pistachio and Walnut. Part II covers two popular beverage species, coffee and tea. This volume is contributed by 53 internationally reputable scientists from 13 countries. Each chapter comprehensively reviews the modern literature on the subject and reflects the authors own experience.

Advances in Plant Breeding Strategies: Nut and Beverage Crops Lavoisier

Today's environmental problems—climate change, loss of biodiversity, polluted air, land, and water—all have their origins to a greater or lesser extent in how we have lived, played and worked. At a time when societies are confronted with the often dramatic consequences of past choices made in the fields of energy,

technology, industry, agriculture, urbanisation and consumption, we need a history that casts more light on the ways in which unsustainable human-nature relationships came into being. This means forging stronger connections between social and environmental history. Common Ground opens up a dialogue between two sub-disciplines that to date have remained largely parallel endeavours, bringing together both established and younger scholars from both fields to explore how people's everyday lives have connected to their environments—and with what effects. The book is organised in six sections: leisure and environment; nature

and conservation; environmental conflicts; folk and scientific knowledge; environmental disasters; and energy, industry and urban infrastructure. By exploring the complex interplay between people's day-to-day activities and ecological change, especially the values, beliefs and environmental experiences of ordinary men and women, we can better understand our past relationships with nature and perhaps make more informed planning and policy choices in the future.

The Mandelbrot set is a fractal shape that

classifies the dynamics of quadratic polynomials. It has a remarkably rich geometric and combinatorial structure. This volume provides a systematic exposition of current knowledge about the Mandelbrot set and presents the latest research in complex dynamics. Topics discussed include the universality and the local connectivity of the Mandelbrot set, parabolic bifurcations, critical circle homeomorphisms, absolutely continuous invariant measures and matings of polynomials, along with the geometry, dimension and local connectivity of Julia sets. In addition to presenting new work, this collection documents important

results hitherto unpublished or difficult to find in the literature. This book will be of interest to graduate students in mathematics, physics and mathematical biology, as well as researchers in dynamical systems and Kleinian groups.

Tree species are indispensable to support human life. Due to their long life cycle and

environmental sensitivity, breeding trees to suit day-to-day human needs is a formidable challenge. Whether they are edible or industrial crops, improving yield under optimal, sub-optimal and marginal areas calls for uni?ed efforts from the s-entistsaroundtheworld. Whiletheuniquenessofcconutaskalpavriksha(Sanskr- meaning tree-of-life) marks its presence in every continent from Far East to South America, tree crops like cocoa, oil palm, rubber, apple, peach, grapes and walnut prove their environmental sensitivity towards tropical, sub-tropical and temperate climates. Desert climate is quintessential for date palm. Thus, from soft

drinks to breweries to beverages to oil to tyres, the value addition offers a spectrum of products to human kind, enriched with nutritional, environmental, financial, social and trade related attributes.

Taxonomically, tree crops do not confine to a few families, but spread across a section of genera, an attribute so unique that contributes immensely to genetic biodiversity even while cultivated at the commercial scale. Many of these species influence other flora to nurture in their vicinity, thus ensuring their integrity in preserving the genetic biodiversity. While wheat, rice, maize, barley, soybean, cassava and banana make up

the major food staples, many fruit tree species contribute greatly to nutritional enrichment in human diet.

The edible part of these species is the source of several nutrients that makes additives for the daily diet of humans, for example, vitamins, sugars, aromas and flavour compounds, and raw material for food processing industries. Tree crops face an array of agronomic and horticultural problems in propagation, yield, appearance, quality, diseases and pest control, abiotic stresses and poor shelf-life.

This study offers a new perspective of Walras'

pure, applied and social economics. Through archival research at the University of Lausanne, Jolink considers Walras' ideas on philosophy and philosophy of science based on a newly constructed taxonomy. Walras' work is placed in a broader context by stressing the nineteenth century cultural and historical background in which he lived. This further gives an insight into the relationship between the romanticism of the early nineteenth century and logical positivism of the twentieth century.

The Royal Dictionary Abridged in Two Parts Cambridge Scholars Publishing
L'écotoxicochimie, est une nouvelle branche

de l'écologie qui se propose d'aborder les atteintes néfastes des produits chimiques sur l'environnement et la santé, à partir des données récentes de la chimie et de la biologie, en s'appuyant sur la toxicochimie, discipline d'interface élaborée en 1979. Les hydrocarbures, famille de base des composés organiques, ont été sélectionnés comme première approche dans Écotoxicochimie – Applications aux hydrocarbures. Ces produits chimiques sont à l'origine de la carbochimie et de la pétrochimie et leur prise en compte a permis de jeter les bases d'une prévention des risques aussi bien toxicochimiques qu'écotoxicochimiques. Risques liés en particulier à toutes les

pollutions hydrocarbonées qui devraient être beaucoup mieux encadrées, tant en milieu domestique que dans les milieux de travail ou dans l'environnement. Ainsi ces hydrocarbures sont impliqués dans des pollutions maritimes retentissantes, qui restent malheureusement toujours d'actualité. Si les pollutions engendrées par l'exploitation maritime du pétrole sont également très inquiétantes, un autre sujet apparaît de plus en plus préoccupant avec l'extraction du gaz et des huiles de schiste, dont la technique mise en œuvre faisant appel à la fracturation hydraulique horizontale, est

constituée d'un véritable cocktail chimique à faire frémir bien des toxicologues avertis... Sans précédent dans la littérature scientifique, toutes les propriétés toxiques des composés les plus utilisés sont présentées clairement dans cet ouvrage, à partir des références bibliographiques les plus actualisées. En tant que chimistes, spécialistes en toxicochimie, soucieux de comprendre pourquoi certains produits chimiques peuvent être dangereux pour la santé et l'environnement, les auteurs André Picot et Frédéric Montandon associés à plusieurs autres spécialistes, présentent, à la fin de l'ouvrage, une approche préventive,

basée sur la sélection de produits de substitution notamment pour les solvants organiques. Trente-quatre fiches résumées dites de Toxicité Chimique (FRTEC) devraient permettre de faire le bon choix parmi les principaux hydrocarbures couramment utilisés, en particulier comme solvants, et ceci dans de multiples disciplines. Par son approche novatrice, cet ouvrage sera indispensable aux professionnels des industries, des PMI et PME de tous les domaines traitant ou utilisant les hydrocarbures ou leurs dérivés, mais aussi aux responsables de santé publique ou des milieux de travail, aux organisations

gouvernementales et non gouvernementales, et aux écologistes de tous horizons... sans oublier les enseignants et étudiants en chimie, en biologie et en écologie désireux de mieux comprendre pourquoi la chimie est à la base de la vie, qu'il nous faut protéger au mieux.

"This book is the outcome of the

conference held in Caen (France) in September 1997, in preparation for the International Economic History Congress in Madrid (August 1998). This collection of essays provides, for the first time, a systematic overview of the productivity missions organised in the years following the Second World War, to investigate in situ the production and management techniques adduced to account for the American lead. Bringing together research workers from many countries (Canada, Denmark, France, Germany, Italy, Japan, the Netherlands, Norway, Switzerland, the United Kingdom, the United States), the volume addresses four successive themes.

The first one concerns the part played by the United States and that country's action on the international scene. This, in turn, leads to the subsequent query: Did the productivity missions constitute tools for modernisation, or were they devices of domination? The second part considers three national experiences: the United Kingdom, France, and Japan. The third part examines a number of branches: iron and steel, electrical engineering, petrochemicals, and the tyre industry. The final part seeks to assess the impact of the missions. Ultimately, one needs must make a distinction between the rhetoric of productivity, on the one hand, and

actual achievements, on the other; the missions were part of a wider process of Americanisation, wherein lies one of the keys to the economic miracles of the post-war era."--Page 4 of cover.
