"Students will find Rita Debnath's Professional Skills in Nursing a great introduction to the challenges of developing their clinical skills." - Mike Parkinson, Edinburgh Napier University
 What do I need to learn in order to progress through my course? How do I achieve the best possible patient-care? Professional Skills for Nurses answers both of these questions and supports the development of key nursing skills underpinned by theory. Designed specifically to meet the needs of nursing students in the initial stages of training, the book focuses on the essential

knowledge and skills needed for effective patient-care while at the same time helping students to achieve the NMC outcomes required for entry into branch programmes. Each chapter focuses on a key aspect of nursing care backed up with - practical tips, - examples drawn from all branches of nursing, and - a range of study activities to help you reflect on your learning and get the most from practice placements. Key themes in healthcare such as ethics, evidence-based practice and health promotion are discussed throughout the book, highlighting how these relate to everyday nursing practice. Focusing on the core skills covered in the initial stages of training, *Professional Skills in Nursing* is the ideal introduction for students during the Common Foundation

Programme.

Increasingly, nurses and other health professionals are required to teach doctors, trainees and medical students. This book also helps to contextualise learning and provide practical tips for teaching in the clinical context for all health professionals. The book will be useful for clinical teachers at whichever stage of career as it covers all areas of health professions' education in an easy to follow style. It provides a theoretical basis to how clinical teaching and learning might be carried out and draws on the experience of well-regarded clinical teachers to highlight practice points. All aspects of clinical teaching

and learning, appraisal, supervision and career development are included. This book is written in an easy to follow format with short chapters, sections, diagrams and practice points. The theory is always related to teaching practice in the clinical context.

In recent years there has been a huge growth in nurse-led clinics within hospital outpatient departments, general practitioner surgeries and health centres. The government has endorsed the use of such clinics as a way for the public to access specialist health care and treatment more quickly and also as an effective way to manage chronic ill health. However, there is a lack of uniform structure in educational

preparation for nurses interested in taking up nurse-led practice and a dearth of literature offering practical guidance. This text provides a much-needed overview of this new arena for nursing and includes case studies from practitioners running nurse-led clinics. Topics covered include: * Setting up a clinic * Public protection issues * Nurse education * Managing medicines * Effectiveness and evaluation. The text allows the reader to explore key practice issues which directly affect the quality of service provided. It will be an invaluable handbook for nurses directly involved in running clinics, for those responsible for the provision of nurse-led services and for nurse educators.

The new edition of Major Incident Medical Management and Support is a vital component in the blended learning course from Advanced Life Support Group (ALSG), which aims to provide hospital staff at all levels with essential information on the preparation, management and support elements of

dealing with casualties in a major incident. Split into five sections, each focuses on the elements requisite in preparing for, and responding, to a major incident. The first section discusses the epidemiology and incidences of major incidents and the structured approach to the hospital response. The second section contains the preparation required in planning for major incidents, including equipment and training. The third section covers the management of a major incident, concentrating on the clinical, nursing and management hierarchies. The fourth includes the various stages of support in a major incident, including declaring an incident and activating the plan, the reception, triage, definitive care and recovery phases of an incident. The final

section focuses on special incidents which require additional consideration, including those involving hazardous chemicals, burns and children. Written in collaboration with the National Emergency Planning, Major Incident Medical Management and Support is an invaluable reference in the emergency department and beyond for staff needing to prepare for the rare, but inevitable, hospital major incidence response.

Robert Dingwall's classic and original study of the training of health visitors (public health nurses) in the UK is now available in a convenient ebook edition, featuring linked chapter endnotes, all tables from the print edition, linked and detailed subject Index, and active Contents. The new digital edition adds a substantive, explanatory 2014 Preface by the author. This book has not been easily available in print for many years, but it has long been regarded as an important contribution to the study of professional socialization. It was one of the first studies to incorporate ideas from ethnomethodology into an ethnographic approach to studying health visitors, proposing that education should be thought of as the production

of competence rather than the internalization of knowledge. The training programme is examined as an organization, to which both faculty and students contribute. This programme is also embedded in a wider set of social relations as the students -- predominantly women -- negotiate the place of their studies within the other demands on their lives in the context of the 1970s. In the process, the book reveals the efforts and possible success of the professionalisation process of this subset of medical service providers; its qualitative empiricism is a model for research that opens up the health visitor position (much like the "physician assistant" or PA in the US who travels to patients and implements the medical practice of a larger network) to a

broader conceptualisation of its location in the medical profession.
